

AI Automation & Data Analyst | Python, SQL, LLM Evaluation, Analytics Pipelines

Early-career AI and data practitioner with hands-on experience building Python automation pipelines, evaluating LLMs, and translating complex datasets into actionable insights. Direct exposure to prompt engineering, metric-driven analysis, and reproducible research workflows. Strong foundation in Python, SQL, Linux, Git, and modern data analytics tools.

CORE SKILLS

Programming & Automation:	Python, SQL, R, Java, C, Bash/PowerShell (basic), Linux/Unix CLI, Git/GitHub
Data Analysis:	Data Cleaning, Exploratory Data Analysis (EDA), Statistical Analysis, Trend Detection, Anomaly Identification
AI / LLM:	Prompt Engineering, LLM Benchmarking, Evaluation Frameworks, Error and Failure-Mode Analysis, Claude API, MCP, Vector Search
Cloud & Web:	Cloudflare (Workers, R2, D1, Vectorize), Netlify Functions, GitHub Pages, REST APIs, HTML/CSS, DNS
Data Visualization:	pandas, NumPy, matplotlib, ggplot2, Tableau, Excel (pivot tables)
Research & Reporting:	Reproducible Workflows, Jupyter Notebooks, R Markdown, Technical Writing, Presentation of Findings

PROFESSIONAL EXPERIENCE

THE ZERO HOUR GROUP – Remote November 2025–Present

Director of Technology and AI Operations

- Web and infrastructure:** Built and maintain thezerohourgroupp.com, a 20-page static HTML/CSS site deployed through GitHub Pages with custom DNS, and executed a full technical SEO buildout (sitemap, robots.txt, Open Graph, JSON-LD schema, GA4) verified in Google Search Console; administer company email and team aliases through Zoho Mail.
- AI data platform:** Architected and deployed the ZHG Hub, a serverless Cloudflare application (Workers, R2, D1, Vectorize, Workers AI) exposing an MCP server, giving the team semantic vector search and automated summarization across the company research and media archive.
- LLM automation:** Designed a guest-to-announcement pipeline on Netlify Functions with Blobs storage, transactional email, and the Claude API that converts intake form submissions into house-style publication copy, and rebuilt a daily research newsletter covering 11 defense and drone tickers in house, replacing a paid external vendor.
- Media operations:** Own production and distribution for two recurring interview series: multi-platform live streaming to YouTube, X, and Substack, podcast syndication to Spotify and Apple, AI-assisted post-production including voice cloning to salvage unusable field audio, and a five-platform weekly analytics rollout.

OLD DOMINION UNIVERSITY – Norfolk, VA May 2025–December 2025

AI Researcher

- Built a unified Python experimentation framework automating dataset handling, experiment configuration, and metric computation across 50+ LLM runs, comparing 8+ prompting strategies to produce publication-ready results for the international AI4SciSci workshop.
- Defined and operationalized evaluation metrics (accuracy, precision, recall, macro-F1) and validated real-world scientific claim datasets (138+ records) through structured cleaning and labeling workflows, translating raw model outputs into interpretable insights.

EDUCATION

Bachelor of Science in Computer Science, Minor in Data Analytics (May 2026 | GPA: 3.4/4.0)
James Madison University – Harrisonburg, VA

PUBLICATIONS

Curtis, B., Dzhaman, S., Maisonave, M., & Wu, J. (2025). "Humans vs. LLMs on Open Domain Scientific Claim Verification: A Baseline Study." In Proceedings of the 2nd International Workshop on Artificial Intelligence for the Science of Science (AI4SciSci), colocated with ACM/IEEE JCDL 2025. CEUR Workshop Proceedings, Vol-4161.

CERTIFICATIONS

Google Data Analytics Professional Certificate, Google / Coursera (January 2025)
Data Cleaning, SQL Analytics, R Programming, Tableau Dashboards, and Case-Study-Driven Analysis Workflows
